Report on the 12th Joint Meeting of BDIAP and the Pathological Society of Great Britain & Ireland

On the 30th of June, I left Rotterdam early to be able to spend a nice day in Harrogate (including lunch at Bettys). That evening, the National Academic Trainee Network Meeting started in Harrogate’s oldest bar. We got an inspirational welcome talk by Prof. Phil Quirke.

The next day, the program started with talks on different structures of academic training by trainees from the UK, Germany, Switzerland and The Netherlands (me). What surprised the other trainees most is that we have 6 months of mandatory research embedded in our Dutch pathology training program.

In the afternoon we had the chance to practise a 3-minute thesis pitch, with three prices to win. The jury could not decide on the 2nd price and four of us received the 2nd price. I was lucky enough to be one of them!

Another interesting part of the program was a reflection on stress by a bomb disposal operator and a training on resilience. We learned to say ‘no’, but also that if everyone always said ‘no’ the work would not get done. It was a very practical and useful course.

The next day, the 2nd of July, the Leeds Pathology Meeting started. I have mostly attended the sessions on ‘Biology and Translation’, ‘Molecular Pathology Pathways’ and ‘Advances in Proteins’ as this seemed most relevant to my PhD project. Especially the ‘Phenotype vs. genotype’ lectures interested me: I learned that the genotype cannot always give as much answers as I thought. I also learned about the 100,000-genome project and how it already helps individual patients with rare diseases. Another interesting part of the program was the BDIAP Kristin Henry Lecture by Prof. McMahon, on the history and future of the IAP. I did not know there are so many divisions all over the world!

I attended the welcome reception and the conference dinner, which where both in very impressive venues. After the conference dinner a band played and we all danced.

On the last day of the meeting, the 4th of July, I presented a poster on one of my PhD projects. It was valuable to present the project to an audience of pathologists and I received some relevant questions.

During the breaks and the social events, I met many other trainees and I could catch up with the trainees I already met last year in Maastricht. That was probably the part I liked most: meeting trainees with a similar interest in academic pathology. I hope it will result in future collaborations!
