

Name: Dr Shima Mohamed
Training year: Specialist Registrar year 5
Beaumont Hospital
Dublin
Republic of Ireland

As a final year histopathology trainee with a keen interest in breast pathology, I saw the joint BDI B/ABP symposium as an excellent opportunity to stay updated in breast developments in the field presented by leading global experts. The event fully met my expectations, offering insightful discussions and updates on contemporary guidelines. It bolstered my confidence in areas such as navigating challenging cases and reinforced the understanding that certain diagnostic complexities are universally acknowledged, even by experts. Key highlights included discussion on salivary gland-like lesions, rare entities such as the spectrum of micro glandular adenosis and adenomyosis epithelioma, and the unveiling of the new data set-a topic I was particularly eager to explore. Given its highly practical nature, I would strongly recommend this symposium to colleagues at all levels, including consultants.
