

Liverpool Pathology Conference 2023

Name: Dr Danah Saif

Training year: ST5

I was eager to attend the Liverpool Pathology Conference because I believed it would offer me valuable opportunities to learn from leading experts in the field of histopathology, stay updated on the latest diagnostic techniques and technologies, and connect with fellow professionals.

During the conference, I thoroughly enjoyed attending the oral and poster presentations, and I had the opportunity to present two poster presentations myself, which I found fulfilling to discuss with the judging panel. Additionally, the conference welcome reception and dinner allowed me to establish valuable connections and friendships with fellow histopathologists, providing a social aspect to the event that enhanced the overall experience. The presence of many colleagues from my deanery further enriched the conference, as we were able to strengthen our bonds, share ideas, and exchange knowledge.

My interest in uropathology led me to focus on attending uropathology-related talks, which proved to be very useful in highlighting current classifications of tumours and benign mimickers of malignant entities. The insights gained from these talks directly influenced my day-to-day practice when reporting cases.

Furthermore, I found talks on research related to AI use in automating the quality control checks of digitized slides particularly interesting, as it showcased the potential for innovative technologies to revolutionize pathology practices.

Additionally, a talk about the role of the intestinal microbiome in understanding colorectal cancer and its potential as a prognostic biomarker, screening aid, and therapeutic target introduced me to a novel concept that left me intrigued.

The Liverpool Pathology 2023 conference not only met but exceeded my expectations. The event was well-organized, with engaging speakers, relevant topics, and ample networking opportunities. The interactive nature of the conference made it a valuable experience that will undoubtedly impact my professional growth positively.

I would wholeheartedly recommend this conference to my colleagues. Attending this event has been an unequivocally rewarding and enriching experience, and I believe my colleagues would find it equally beneficial. Moreover, I am looking forward to participating in similar conferences in the future to further enhance my knowledge and understanding of current developments in pathology.
