Conference Report: Liverpool pathology 2023

The 14th Joint Meeting of the Pathological Society of Great Britain and Ireland and the British Division of the International Academy of Pathology, Liverpool Pathology 2023, took place at the University of Liverpool, UK/England on 27-29 June 2023 and brought together histopathologists, molecular pathologists, researchers, clinicians, laboratory technicians, trainees, PhD students, and undergraduates to hear about the latest advances in our rapidly changing field of pathology.

I couldn't wait to obtain experience, take advantage of many networking and educational opportunities, and learn about the most recent advancements in pathology at this conference.

I learned a lot from attending this conference, and it gave me new knowledge and skills, particularly regarding the most recent pathology research findings, methodologies, and technological advancements. With the help of the networking opportunities, exposure to fresh perspectives, and inspiration I experienced at the conference, the Liverpool Pathology 2023 meeting significantly boosted my confidence in my daily practice.

Major highlights of the event:

1. Parallel Sessions: A wide range of topics, including obstetrics and gynecology pathology, gastrointestinal pathology, renal pathology, and many more, were covered during the conference's numerous parallel sessions. Participants had the chance to participate in in-depth conversations, present their research findings, and get helpful criticism from their colleagues.

2. Poster Presentations: Poster sessions gave young researchers a chance to display their work and get comments from a wide range of people. The participants' communication and cooperation were encouraged during these sessions.

3. Networking Possibilities: The conference gave guests lots of chances to connect, share ideas, and forge new partnerships. Coffee breaks, networking activities, and social gatherings promoted fruitful contacts amongst participants.

4. Exhibition space: To further enhance the conference experience, a dedicated exhibition space showcased the most recent products, services, and publications from participating companies and sponsors.

As conclusion: The Liverpool Pathology 2023 conference fostered teamwork, knowledge exchange, and inspiration among delegates. I would like to encourage my fellow pathologists and lab scientists to submit their applications in order to be able to attend similar scientific events in the future. Many thanks to BDIAP, especially the Education & Divisional Management team, without whose support and help I would not have been able to attend this significant event.
