

- Name: Lamia Sabry Aboelnasr
- Training year: a 5th -year pathology trainee, Egypt

Being a pathology trainee, I wanted to improve my knowledge and skills in macroscopic pathology, get more tips about the tips and tricks that I should consider on handling different specimens. I was also very eager to stay up-to-date with the latest developments in the field of molecular pathology and network with colleagues and professionals about to how much extent it could be incorporated in clinical practice.

After attending this event, I can feel that I am more confident now in my ability to cut up different specimens with proper knowledge about the impact of each macroscopic item on staging and therapeutic decisions accordingly. The event provided me with valuable insights and practical tips on how to approach various specimens and assess their characteristics accurately. Interestingly, attending this event has been also an excellent opportunity for me to enhance my knowledge in molecular pathology. The event provided an in-depth overview of the latest research trends and techniques used in molecular pathology in different subspecialties. Through the insightful presentations and interactive sessions, I gained a comprehensive understanding of the different molecular techniques used in diagnosis, prognosis, and therapy of various diseases. I am sure that the knowledge and skills I have gained will help me stay updated with the latest developments in molecular pathology and make informed futural decisions in my field.

I can say that this event was exceptional. The pre-session scientific materials, the organization and execution of the event were impeccable, and the speakers were all experts in their respective fields, providing valuable insights and practical tips. The session on molecular pathology was particularly insightful, with the latest trends and techniques being discussed in detail. The session on cut-up specimens was also incredibly informative, and I learned how to approach different specimens with accuracy and precision, keeping in mind the prognostic implications of each item. I also appreciated the

interactive nature of the event, with ample opportunities for participants to ask questions and engage in lunchtime discussions.

Overall, I found the event to be extremely beneficial, and it exceeded my expectations. I would highly recommend it to anyone interested in molecular pathology and histopathology practice, and I look forward to attending similar events in the future. Thank you to the organizers for putting together such a valuable and insightful event.
